

ELITE SERIES

THE AMAZING NEW

AIR TO AIR SYSTEM WITH BUILT IN SOLAR AIR HEATING

The Elite Series Air-to-Air System combines mechanical ventilation heat recovery (MVHR), and central air conditioning with smart app technology for comprehensive home ventilation, heating, and cooling. Our latest addition, the New Boost Mode Function, gives access to the Solar Air Heating Panel system, tapping into solar energy for cost-free power.

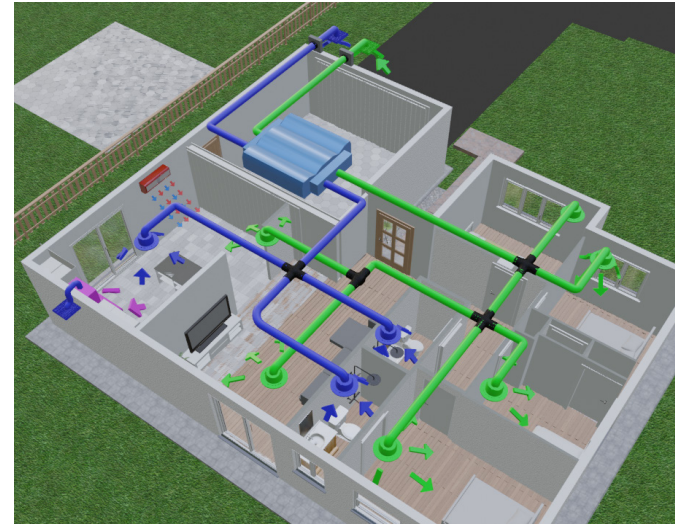

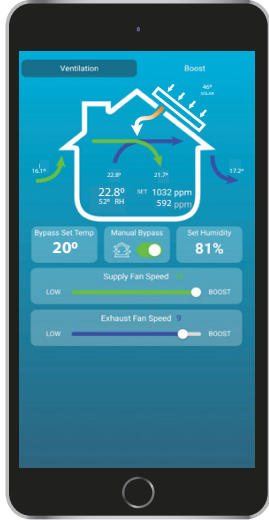

SET UP THE RIGHT VENTILATION SOLUTION FOR YOUR HOME.

Remove stale damp air from your home and introduce fresh filtered air.

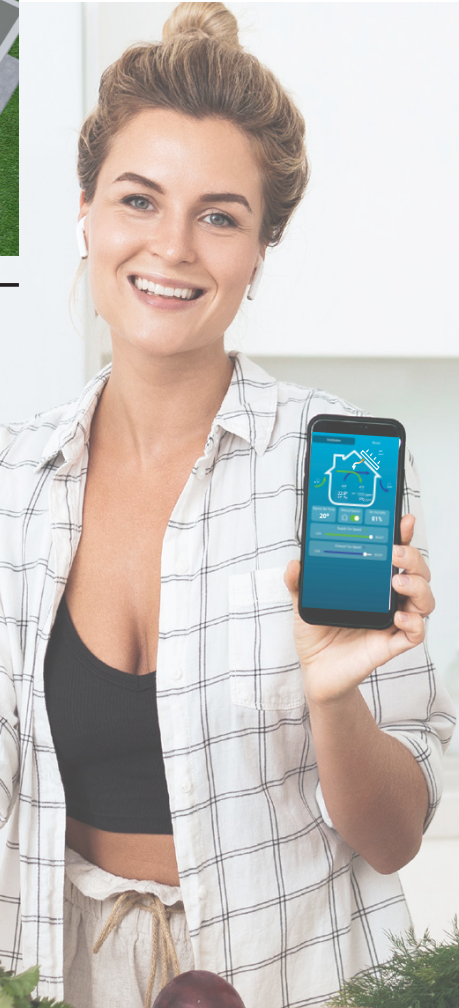

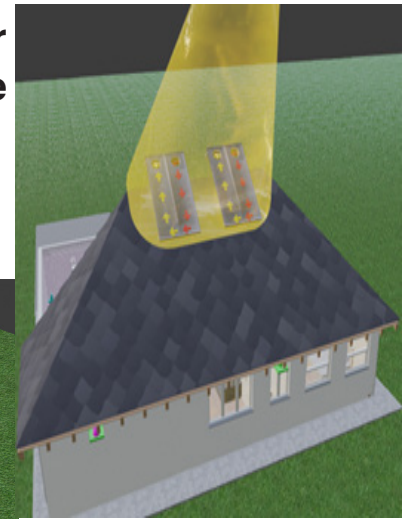

MECHANICAL VENTILATION WITH HEAT RECOVERY (MVHR)

KEY FEATURES:

- Built in Summer Bypass
- Live CO2 readings
- Fresh Air Supply to all living areas
- Moisture Extraction from all wet areas
- Humidity sensor control
- Comes with a range of G4 to F7 filters
- A range of high quality heat exchangers
- All models come with a range of pre-heater options
- Different mounting options available for each system
- Options to control supply & extract fan speeds
- Additional Fan Control capacity
- Live temperature readings every four minutes
- Boost mode now featuring Solar Air Heating and Fresh Air modes.

New Solar Air Heating Feature

CHOOSE FROM FOUR AMAZING MVHR OPTIONS

PremAIR

ErgoAIR

SlimAIR

Overview

- Range of models and sizes to suit every home
- Specialised components for MVHR units
- Heat Exchanger efficiency range, 84% - 96%
- Leading European brand from Poland
- **Slim Air 250** is Passive House Approved

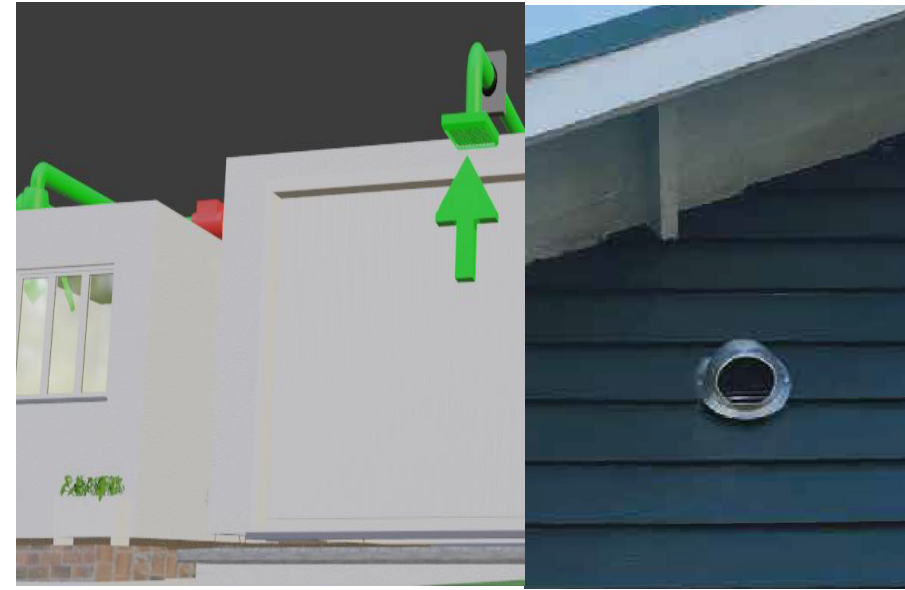

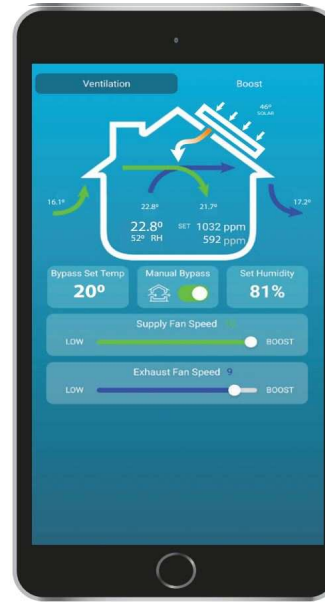

MinistAIR

BOOST MODE

EXPERIENCE THE BEST OF BOTH WORLDS WITH OUR INNOVATIVE
SOLAR AIR HEATING MODE AND FRESH AIR MODE

SOLAR AIR HEATING MODE

Choose up to three areas you want to target on the **South Side** of the home

Tap into the potential of **free, sustainable energy** using Solar Air Heating Mode. Capture the warmth of solar air on the north side of your residence and distribute it to overlooked spaces deprived of sunlight. **Direct this energy** towards rooms or troublesome spots situated on the southern side or in the lower levels of your house. **Transform a designated area** into a drying room while ensuring cosy comfort throughout your home.

FRESH AIR/ SUMMER COOLING

Choose up to three areas you want to target on the **North Side** of the home

For those hot, muggy rooms and distant nooks and crannies, especially on the north side craving coolness, our Fresh Air Mode **breathes revitalisation**, bringing in crisp, refreshing air. Say goodbye to neglected spaces as our system extends its care to downstairs areas needing an **extra boost of fresh air**.

With Boost Mode, enjoy ultimate efficiency while maximising the power of nature for your comfort.

SET UP THE RIGHT HEATING & COOLING SOLUTION FOR YOUR HOME

We offer underfloor, in-ceiling installation or a combination of options to suit every home.

OPTION ONE - FULL HOME SOLUTION

KEY FEATURES

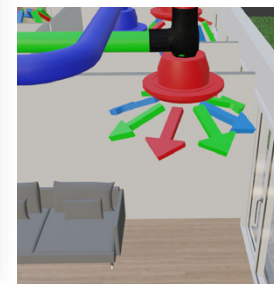

- Heating and cooling to all rooms through concealed ceiling vents or floor grilles
- Split system options to manage the temperature in the house, including central ductwork for the entire house and floor grilles or hidden ceiling vents for heating and cooling in each room.
- Deliver warm and cool air to every room in the house, something that highwall heat pumps cannot do on their own. Select a high wall, ceiling cassette, or floor console unit for the living/dining areas, or use a ducted unit only for the bedrooms.
- The system has several operating modes, including heating, cooling, drying, fan mode (which solely uses the indoor unit to provide more air), and Auto Mode, which enables the system to adjust to the most energy-efficient mode of operation.
- Complete variable zone control will help you reach the ideal temperature in each zone.
- Control rooms based on time or temperature by using the scheduling tool.
- System installation options include underfloor and in-ceiling spaces.

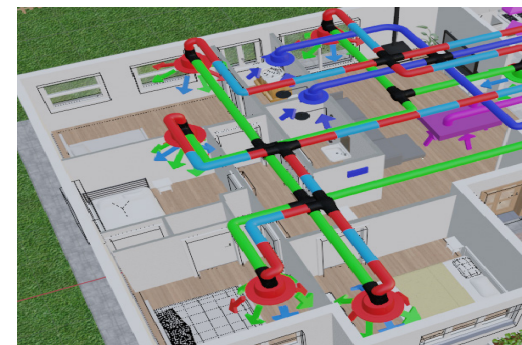

OPTION TWO - SPLIT HOME SOLUTION

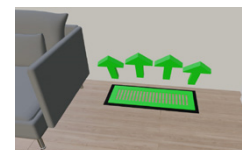

Put your living room heat pump in the ceiling, on the floor or on the wall

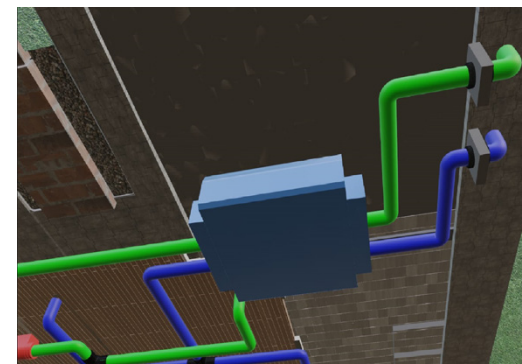

Ceiling Diffuser

In Ceiling system layout

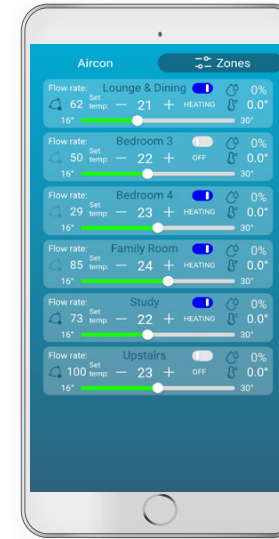

Floor Grille

Under floor system layout

ENJOY FULL HOME ZONE CONTROL

Wireless temperature sensor control throughout. Your home, your way.

ZONE CONTROL

Choose the amount of heating and cooling you'd like in each room/zone.

SMART WIRELESS SENSOR CONTROL

Schedule zones to a desired temperature and control the flow rate

AUTO HEATING AND COOLING MODE FEATURE

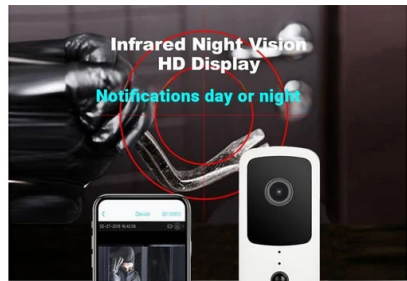

With the help of the smart control system, you can conserve energy by adjusting the temperature in any area or room that becomes too hot or cold. Just set it and forget it.

FEATURES INCLUDE:

- A Smart Control Tablet that gives you access to digital apps for both Android and Apple devices.
- Select up to six zones to manage
- Create separate zones out of every area, including open areas
- Combine two rooms into one zone
- Choose the percentage of air flow for each zone
- Control the flow rate between 0-100% for any zone
- On the wall of each zone is a wireless temperature sensor
- Each wireless temperature sensor has a button that enables manual zone management
- Every four minutes, the wireless temperature sensors provide you with real-time measurements
- Schedule and set zones to open and close based on time and/or temperature
- Set your desired temperatures for each zone – once temperature is achieved the zone will go into holding mode
- Operate your smart control system from anywhere in the world
